

Now Available in VIP™: Range of Motion

with Osteophyte Removal and Multiplan Functionality

- Simulate impact of implant selection and position on range of motion
- Directly compare ROM outputs with up to 3 implant constructs
- Remove potential bony impingement by using the osteophyte removal tool at any point during preoperative planning
- Plan efficiently with the enhanced user interface designed for intuitive decision-making and refinement
- Approve up to two preoperative plans within one case and receive 5D Targeter and VIP Ream Depth settings for each plan
- Use multiple plan capability as a medical education tool, comparing what attending surgeon planned with residents or fellows
