

Hand, Wrist, and Elbow

Next Generation in Repair and Reconstruction

Arthrex®

Helping Surgeons Treat Their Patients Better®

Since its inception, Arthrex has been committed to one mission: Helping Surgeons Treat Their Patients Better. We are strategically focused on constant product innovation through scientific research, surgeon collaboration, and medical education to make less invasive surgical procedures simple, safer, and more reproducible. Each year, we develop more than 1,000 new innovative products and procedures to advance minimally invasive orthopedics worldwide.

Arthrex has always remained a privately held company, which allows for the rapid evaluation of new technologies and ideas and the freedom to develop products and techniques that truly make a difference. Our experienced team of dedicated professionals represents a shared passion and commitment to delivering uncompromising quality to the health care providers who use our products and the millions of patients whose lives we impact.

The medical significance of our contributions serves as our primary benchmark of success and will continue into the future as the legacy of Arthrex.

Hand and Wrist Internal/Brace™ Surgical Technique

The hand and wrist *Internal/Brace* ligament repair system provides the surgeon with a means to perform an *Internal/Brace* procedure with the ease of one all-inclusive kit.

The forked eyelet PEEK SwiveLock® anchors allow for repairs requiring various suture materials, biologic grafts, or a combination of both. The blind tunnel technique creates a knotless augmentation. When suture is used in addition to the soft-tissue repair, the construct permits early motion and limited postoperative immobilization.¹

Reference

1. De Giacomo AF, Shin SS. Repair of the thumb ulnar collateral ligament with suture tape augmentation. *Tech Hand Up Extrem Surg.* 2017;21(4):164-166. doi: 10.1097/BTH.0000000000000173

The *Internal/Brace* surgical technique is intended only to augment the primary repair/reconstruction by expanding the area of tissue approximation during the healing period and is not intended as a replacement for the native ligament. The *Internal/Brace* technique is for use during soft tissue-to-bone fixation procedures and is not cleared for bone-to-bone fixation.

FiberLock® Suspension System

The FiberLock suspension system for CMC arthritis is a single-incision suture suspensionplasty using the latest in anchor and suture technology. A FiberTak® all-suture anchor provides cortical fixation on the far cortex of the second metacarpal. The 1st metacarpal is suspended underneath with the SutureTape from the FiberTak anchor, which is then secured into a knotless DX SwiveLock® SL anchor in the 1st metacarpal.

Specialized instrumentation allows for precise drilling and insertion of the FiberTak anchor through the same standard incision made for trapeziectomy. All contents are conveniently packed in a single-use system kit.

Advantages

- Cortical-to-cortical fixation
- Single incision
- Knotless construct
- Radiolucent construct
- Direct visualization for placement of both anchors

CMC Mini TightRope® Fixation

Mini TightRope fixation provides a unique means to suspend the thumb metacarpal after trapezial resection or removal for treatment of CMC arthritis and thumb CMC instability and in revision cases with proximal migration after failed tendon reconstruction.

The Mini TightRope implant supports and maintains the thumb and index metacarpals in proper relation, while allowing for healing and scar tissue formation in the trapezial space.

The construct consists of 2 strands of #2 FiberWire® suture that are affixed with 2 oblong stainless steel buttons for cortical fixation. The trapezial space may be left empty or filled with an allograft/autograft "anchovy" spacer.

Advantages

- Stabilizes and helps protect biologic repair
- May allow earlier rehabilitation¹
- Maintains trapezial space
- Solid and stable suspensionplasty
- Allows flexible suture-based fixation

CMC Ligament Reconstruction, LRTI Convenience Kit

The CMC Ligament Reconstruction Implant System provides a convenient all-in-one solution for ligament reconstruction of the base of the thumb. By combining our state-of-the-art Tenodesis Screw System with a convenient disposables kit, the CMC Ligament Reconstruction Implant System may enable a faster, more convenient repair.

Elbow Ulnar Collateral Ligament (UCL) Reconstruction Set

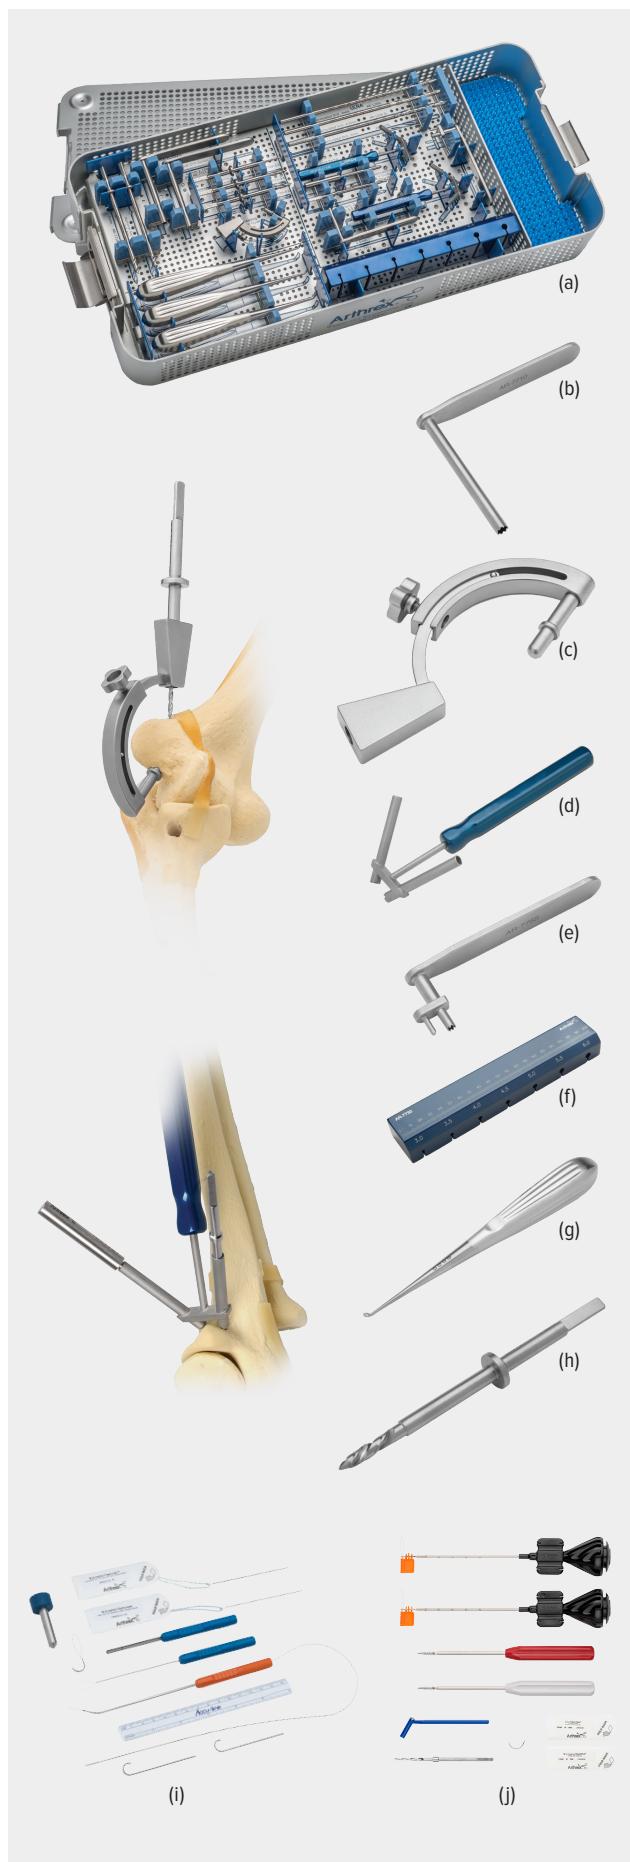

This set includes all the instrumentation needed to perform elbow UCL reconstructions and accommodates the modified Jobe, docking, and DANE TJ techniques in addition to techniques using tenodesis screws or button fixation. This set's guided instruments, drills, and reamers allows precise placement of bone tunnels and sockets in the ulna and humeral epicondyle. The recommended disposable kits provide novel instruments to easily pass sutures through the prepared bone tunnels and sockets, making graft passage quick and easy.

FiberTape® Cerclage System

The FiberTape cerclage system consists of specially designed FiberTape sutures, passing needles, passing hooks, and a tensioner. The system is designed to replace standard cable and wire systems commonly used in upper and lower extremity trauma, arthroplasty, and sternal closure indications.

- 100% radiolucent – no radiographic interference from cerclage
- No concerns of metal mismatch with adjacent implants
- No sharp ends or broken wires to potentially harm the patient or medical staff
- No metal debris migration or concerns of metallosis

DX SwiveLock® Anchors

Specifically designed for the small bones in the hand and wrist, the 2.5 mm titanium Nano SwiveLock anchor is 7 mm in length, contains a PEEK eyelet and titanium anchor body, and will allow surgeons to perform ligament repairs with an *Internal/Brace™* surgical technique in the phalanges and elsewhere. This anchor was designed to be used with 1.3 mm SutureTape in conjunction with FiberWire® suture. Graft cannot be used with this anchor.

The 3.5 mm PEEK DX SwiveLock anchor is offered in two lengths, 13.5 mm and 8.5 mm. These all-PEEK anchors boast a high insertion strength.¹ The DX SwiveLock SL anchor is commonly used for scapholunate, thumb UCL, and CMC arthroplasty.

Both the 13.5 mm and 8.5 mm length anchor options are available in convenient disposables kits that include multiple drill bits depending on the bone quality, drill guides, and bone taps.

PushLock® Knotless Suture Anchors

The BioComposite PushLock suture anchors provide a secure means of knotless fixation in the hand and wrist. Accommodating 2 strands of FiberWire® suture, this 2-piece anchor enables a no-profile repair that is quick and straightforward.

The PushLock anchor uses a PEEK eyelet to place the sutures at the bottom of a drill hole, allowing surgeons to tension the sutures in place by impacting the tak portion of the anchor. The high-strength radiolucent PEEK and absorbable BioComposite PushLock anchors optimize tissue tension and fixation without knot tying.¹

SutureTak Anchor

This longstanding family of unique “push-in” anchors now includes the added benefits of SutureTape in 2.4 mm and 3 mm small joint SutureTak anchors.

- **Excellent Cortical Purchase**—with ridges along their entire length, these anchors provide superior pull-out in harder cortical bone¹
- **Minimized Suture Abrasion**—the suture-on-suture eyelet interface avoids the type of wear that can occur between an anchor and suture
- **Straightforward Technique**—simple, shorter instrumentation and technique create a reliable and quick procedure
- SutureTape technology provides increased resistance to tissue pull through, stronger knotted constructs, tighter and smaller knot stacks and better handling characteristics compared to #2 round suture.²

Corkscrew® FT Suture Anchors—Nano, Micro, Mini, and 3.5 mm

The Nano, Micro, Mini, and 3.5 mm Corkscrew FT suture anchors are designed with a fully threaded length to create maximum cortical purchase in smaller bones. Using an internal drive mechanism and suture eyelet, these titanium anchors enable surgeons to secure threads in the best bone—the cortex.

- **Fully Threaded**—for maximum cortical purchase
- **Convenient**—predrill the cortex with included K-wire and insert the anchor
- **Preloaded With FiberWire® Suture**—for superior strength¹ and handling ease
- **Preloaded With Smaller Tapered Needles**—to save surgical time

Tenodesis Screw System

Available in biocomposite and PEEK materials, the Tenodesis Screw System provides the most technologically advanced interference fixation. Biocomposite implant material composed of β -TCP and PLLA offers the same benefits of the bioabsorbable material, with the addition of 15% beta-tricalcium phosphate. Studies suggest that early bone formation can be connected to the favorable osteoconductive and bioresorbable properties within β -TCP.¹

The system provides solid and immediate fixation for hand, wrist, and elbow procedures such as LRTI for CMC arthroplasty, collateral ligament reconstruction, and biceps tendon repair.

FiberWire® Suture

FiberWire sutures are constructed of a multistranded long-chain ultra-high molecular weight polyethylene (UHMWPE) core with a braided jacket of polyester and UHMWPE. FiberWire sutures have twice the strength of similar-sized generic sutures with superior feel, tie-ability, and lower knot profile.¹

FiberWire sutures can be used for most orthopedic small joint procedures, whether in conjunction with suture anchors or for tenodesis applications and tendon repairs.

FiberStick™ Suture

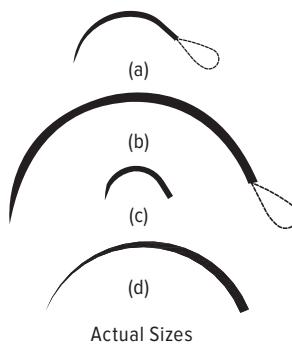

The stiff “waxed” end of the FiberStick suture allows convenient and easy advancement through the Micro SutureLasso™ suture passer and other cannulated instruments or spinal needles, alleviating the need for a monofilament suture or wire suture shuttle. FiberStick sutures come with a thin plastic tube that protects the stiffened suture end until use.

Product Description	Item Number
2-0 FiberStick Suture, 2-0 FiberWire suture, 50 in, one end stiffened, 12 in, blue	AR-7222

FiberLoop® Suture

FiberLoop sutures are the perfect option for multistrand tendon repairs. These small-diameter looped FiberWire® products allow for strong multistrand flexor and extensor tendon repairs, while minimizing tendon damage with fewer needle passes. FiberLoop sutures are available with multiple needle options to help prevent cutting suture while stitching.

Suture Strength and Elongation

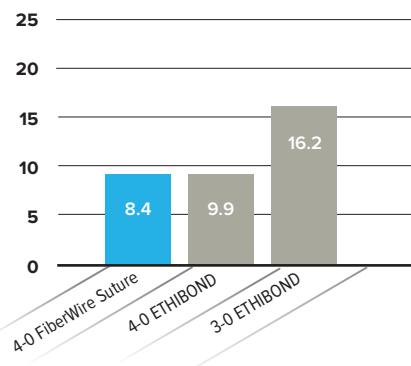

When comparing 4-0 FiberWire sutures to 4-0 and 3-0 ETHIBOND™, FiberWire sutures had significantly higher knot pull strength.¹

Knot Strength (kgf)

When comparing 4-0 FiberWire sutures to 4-0 and 3-0 ETHIBOND, FiberWire sutures had a significantly lower percentage of elongation at yield load.¹

Percent Elongation at Yield Load

Wrist Plating System

The Wrist Plating System provides a comprehensive solution for distal radius fracture management. Narrow, standard, and wide plates are available in multiple shaft lengths. A variety of screw fixation options, aiming guides, and instrumentation allows for customizing according to the surgeon's needs and the complexity of the fracture.

Sterile Distal Radius Implant Kit

The Sterile Wrist Plating Kit is a sterile, convenient solution for distal radius fracture management. With narrow and standard 2.4 sterile plates offered in 3 hole lengths, the kit includes all disposables, depth gauge, drill bit, screwdriver, drill guide, guidewires, plate, and locking and nonlocking screws.

2.4 mm Volar Distal Radius Trial Plates

Product Description	Item Number
2.4 Volar Distal Radius Trial Plates, sterile	AR-8924VT-S

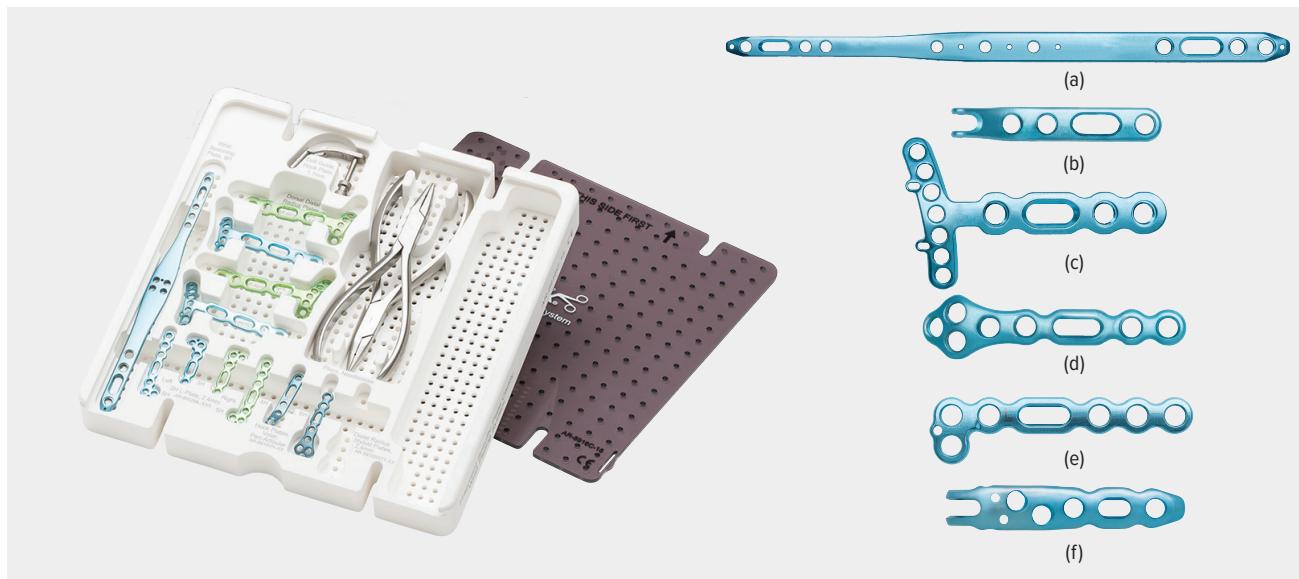

2.4 mm Volar Distal Radius Removal Driver

Product Description	Item Number
2.4 Volar Distal Radius System Removal Driver, sterile	AR-8924VD-S

Sterile Screws (Individually Packed)

Product Description	Item Number
VAL Screw, 2.4 mm, sterile, 8 mm-28 mm	AR-8724V-xxS
Nonlocking Cortical Screw, 2.4 mm, sterile, 8 mm-28 mm	AR-8916CX24-xxS
Spare Screw Caddy	DS-8924BX

Fragment-Specific Plating

The Fragment-Specific System caddy offers plates that are tailored to the specific fracture encountered. The plates address all 3 columns; a spanning plate is also included for highly comminuted distal radius fractures.

The dorsal L-plates can be used in conjunction with the radial styloid plate to address the radial and intermediate columns independently.

The volar hook plate can be used for volar rim fractures that are too distal to be captured by the volar distal radius plate.

Fragment-Specific System (AR-8916FS)

Product Description	Item Number
Fragment-Specific System Base and Lid	AR-8916C-21
Instrumentation	
Drill Guide, parallel, volar hook plate, 1.7 mm	AR-8916-26
Pliers, needlenose, qty. 2	AR-8916-24

Small External Fixation

The comprehensive Small External Fixation ("Small Ex-Fix") System can be used on all small bones in the body, with particular emphasis on wrist fractures.

The Small Ex-Fix consists of:

- 2 mm and 3 mm pins with varying overall lengths and thread lengths
- 5 mm carbon fiber rods ranging in length from 50 mm to 300 mm
- Multi- and single-pin clamps

French Bending Iron	AR-7650-27
Eccentric Drill Guide	AR-7650-12

Fully threaded (FT) compression screw with variable-stepped pitch and locking head

Optional instrumentation releasing winter 2024.

The following screws are compatible with the plates and can be found either in the Wrist Plating System, Ankle Fracture System, Comprehensive Fixation System (CFS), or KreuLock™ locking compression screw system. Additional 3.5 mm nonlocking screws can be brought in the auxiliary CFS or ankle fracture screw caddies (**AR-8950C-10** or **AR-9943C-SC**).

Screws must be purchased separately.

Proximal Humeral Plating System

The ALPHA plate is a unique anatomical side-specific plate with a proximal contour that allows for sparing of the deltoid insertion and avoidance of dissection/soft-tissue stripping at the subdeltoid space.

Humeral Nail System

The Arthrex Humeral Nail System consists of both short and long intramedullary nails. The 15 cm short nail is best suited for simple two-part fractures of the proximal humerus involving the surgical neck of the humerus and for proximal third humeral fractures without comminution. The long humeral nail is primarily intended for humeral shaft fractures, which are inherently not prone to varus malposition.

Clavicle Plate and Screw System

This system is a comprehensive set of plates, screws, and instrumentation designed to treat central third and distal clavicle fractures. The low-profile, precontoured, stainless steel plates combine locking and nonlocking options.

Product Description	Item Number
Clavicle Plate Set includes	AR-2650S
Cannulated Driver Handle	AR-13221AOC
BB-Tak, disposable	AR-13226
Distal Clavicle Plate Positioning Handle	AR-2659
Plate Bending Pliers	AR-2660
Distal Clavicle Screw and Drill Guide, left	AR-2664L
Distal Clavicle Screw and Drill Guide, right	AR-2664R
Verbrugge Forceps w/ Pivoting Jaw	AR-2662
K-Wire, 0.062 in, 3 in, disposable	AR-2663
T10 Hexalobe Driver	AR-2665-T10
T15 Hexalobe Drive Shaft, long	AR-2666-T15
Drill/Screw Guide Sleeve	AR-2668
Drill, 2 mm	AR-2669
Screw Depth Indicator, 2.7 mm	AR-2670
Step Drill for 2.5 mm Fragment Screw	AR-2752
T8 Hexalobe Driver	AR-8916-22
T15 Hexalobe Driver	AR-8941DH
Drill Guide, 2.6 mm/1.35 mm	AR-8943-03
Bone Reduction Forceps	AR-8943-07
Screwdriver, T10 hexalobe	AR-8943-08
Screwdriver, T15 hexalobe	AR-8943-10
Screw Holding Sleeve	AR-8943-11
Drill Bit, 2.5 mm, disposable	AR-8943-13
Drill Guide, 3.5 mm/2.5 mm	AR-8943-14
Depth Device	AR-8943-15
Drill Bit, 2 mm, disposable	AR-8943-16

Mini Comprehensive Fixation System (CFS)

The Mini Comprehensive Fixation System (CFS) consists of titanium, variable-angle locking (VAL), low-profile plates and screws designed for osteotomies, fusions, and fractures of small bones.

- 1 mm, 1.4 mm, and 1.6 mm (hand and wrist)
- 2 mm and 2.4 mm (hand, wrist, foot, and ankle)

Features and Benefits

- 56 plating options
- Universal straight, T-, wide T-, V-, and Y-plates
- Reinforced straight and T-plates
- Unique bridge, cage, and triangle plates
- VAL holes
- Compression holes
- 1, 1.4, 1.6, 2, and 2.4 mm screws
- Color-coded modules with intuitive instrumentation
- Curved plate cutter
- Superior screw-holding sleeve
- Extended 2.5 Compression FT screws for intramedullary fracture fixation
- Extended 3.5 Compression FT screws for intramedullary fixation

1.4 mm Module

- 10 plates
- 6 mm-16 mm screws

1.6 mm Module

- 11 plates
- 6 mm-24 mm screws

2 mm Module

- 18 plates
- 6 mm-40 mm screws

2.4 mm Module

- 17 plates
- 6 mm-40 mm screws

Trauma Mini Fragment System

The Arthrex Trauma Mini Fragment ("Mini Frag") System is designed to aid in the reduction and fixation of small and long bone trauma injuries. The modularity of the tray offers screw and plate options in 2 mm, 2.4 mm, and 2.7 mm variants. With an array of plate options and a variety of plates to fit a multitude of trauma needs, the Mini Frag is a keystone addition to the Arthrex Trauma lineup.

Cannulated Drill Bit, 3.6 mm	AR-8741-32

Compression FT Screw System (2.5 Micro, 3.5 Mini, and 4.0 Standard)

The cannulated titanium 2.5 Micro, 3.5 Mini, and 4.0 Standard Compression FT headless screws can be used for a wide range of indications in the upper extremities. The variable-stepped thread pitch and headless design help reduce the risk of profile complications, provide compression, and allow for simplified insertion. With these screws, surgeons can now achieve zero-profile, stable fixation in small bones of the hand and wrist.

Key Features and Benefits

- **Variable-Stepped Thread Pitch**—the screw tip's wider thread pitch enters the bone faster than trailing threads, gradually compressing the fragments as the screw is advanced
- **Headless**—the titanium screws can be implanted intra-articularly and extra-articularly with minimal risk of impingement or soft-tissue irritation
- **Self-Drilling and Self-Tapping**—2 sets of cutting flutes facilitate insertion
- **Multiple Size Options**—the screws are available in 2.5, 3.5, and 4.0
- **Cannulation**—assists in accurate placement for both percutaneous and open indications
- Hexalobe recess in 3.5 and 4.0 Compression FT screws provide improved torque transmission.
Note: 2.5 mm screw has 1.5 mm hex driver
- Available in titanium alloy

Compression FT Screw System Set (AR-8738S)

Product Description	Item Number
Instruments	
Depth Device	AR-8737-51

Snap-Off Compression FT Pins (1.9 mm and 2.4 mm)

The new Snap-Off Compression FT pins offer solutions for both the upper and lower extremities as well as the trauma setting. The ease of use, variable-stepped thread pitch, and wide range of sizes in diameters of both 1.9 mm and 2.4 mm represent an innovative new technology to help treat indications including joint arthrodesis, intra- and extra-articular fractures, and nonunions. The pins can also be used in conjunction with other Arthrex products to compress bone fragments.

- Variable-stepped thread pitch—the screw tip's wider thread pitch enters the bone faster than trailing threads, gradually compressing the fragments as the screw is advanced
- Convenient and quick surgical technique
- Self-drilling and self-tapping to facilitate insertion
- Multiple size options for 1.9 mm and 2.4 mm diameters
- Solid implant maximizes strength¹
- Available in titanium

2.5 mm/3.0 mm Headless Compression PT Screws

The cannulated titanium 2.5 mm and 3.0 mm Headless Compression PT screws can be used for fixation of osteotomies, fusions, and fracture fixation in upper and lower extremities—foot and ankle, hand and wrist, and elbow. The headless design helps reduce profile complications, provides compression, and allows for simplified insertion.

For larger bone fixation, 4.3 mm and 6.5 mm Headless Compression PT screws are also available.

Key Features and Benefits

- Titanium
- Cannulated
- Hexalobe drivers
- Self-drilling and self-tapping
- Color-coded instruments

KreuLock™ Locking Compression Screw System

KreuLock locking compression screws combine the proven technology of Headless Compression FT screws with a locking screw head to provide compression along the screw for treatment of fractures or fusions. They will also bring the plate to the bone.

- **Variable-Stepped Thread Pitch**—the screw tip's wider thread pitch enters the bone faster than trailing threads, gradually compressing the fragments as the screw is advanced
- **Locking Head**—mates with existing plates
- Individual screw and instrument modules for each screw family
- Available in titanium and stainless steel

DynaNite® Nitinol Staples

DynaNite staples provide low-profile compressive fixation specifically engineered for small bone osteotomies and fusions. The staples feature:

- A low-profile 1 mm staple bridge height in the small sizes—ideal for hand procedures
- Greater compression than competitor staples in larger sizes¹
- Fourteen different sizes offered in a combination of bridge widths and leg lengths
- Easy-to-use instrumentation for quick and accurate insertion
- Staple is delivered preloaded on the DynaNite delivery device; the staple is also reloadable
- Trocar-tipped alignment pins provide better bite than traditional flat-bottom alignment pins and are particularly useful for fluoroscopy
- Ergonomically designed DynaNite delivery device allows surgeons to control the opening of the staple legs
- Drill guide windows facilitate easy location of staple legs in drilled holes
- Sold in single-use, disposable kits

Carpal Tunnel Solutions

NanoScopic™ Release System	54
Centerline™ Endoscopic Carpal Tunnel Release (ECTR) System.....	55

NanoScopic™ Release System

A simplified, all-in-one system, the NanoScopic carpal tunnel release system streamlines ECTR procedures. Designed for precision and efficiency, this disposable system facilitates a straight-forward, single-handed pull blade technique that enables a quick and exact procedure, while offering an ergonomic design for maximized comfort and an improved feel and function during the procedure.

Highlights

- No trays and sterilization
- No light guide
- No coupler
- No heat
- No fogging

Increase your case volume with the mobility of the NanoScopic disposable release system.

Centerline™ Endoscopic Carpal Tunnel Release (ECTR) System

Clinical data supports an earlier return to normal activities after undergoing ECTR over open procedures for carpal tunnel release.¹ The Centerline system raises the bar for endoscopic carpal tunnel procedures by increasing safety, visualization, and ergonomics.

- **Simplified**—straightforward instrumentation and a disposable blade mechanism that contains all moving parts may speed up procedures and lessen the chance for maintenance issues
- **Straightforward**—single-handed, pull-blade technique enables a quick and exact technique
- **Optimal Comfort**—ergonomic design for better feel and function during the procedure
- **Convenient**—sterile, single-use, disposable blade sheath streamlines OR and facility handling

- Medical-grade camera control unit and camera card edge
- 13 in, 3-in-1 camera control unit
- Network capabilities to connect to facility's health record, PACS, and Synergy Surgeon™ app
- Built-in microphone for video dictation without an external microphone
- HDMI output to extend the video signal to in-room displays and integration systems
- Printing capabilities
- Adjustable brightness

NanoNeedle Camera Specifications

- 3 mm × 100 mm depth of field
- 125 mm, 180 mm, and 250 mm lengths

Economic Impact

Nano arthroscopy is a cost-effective alternative to standard arthroscopy. A single-use camera component eliminates procedure delays due to equipment cleaning, processing, and sterilization without costly maintenance, repairs, or upgrades related to traditional video stacks. The minimally invasive approach and unlimited access to joint spaces make the NanoScope™ system the instrument of choice for less invasive arthroscopic procedures.

Small Joint Arthroscopy Hand Instrument Set

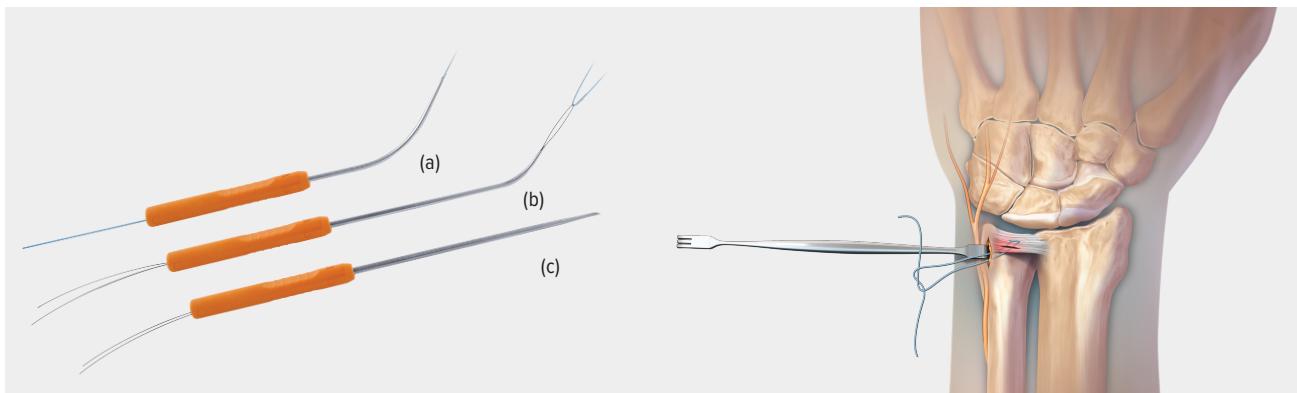

The Series I Small Joint Arthroscopy Instrument Set features a complete line of small yet durable instruments specifically designed for wrist arthroscopy. They are available in a variety of low-profile styles: straight, rotary, and grasper. Each Series I instrument has a lifetime warranty against manufacturing defects. The instruments' shaft length is 65 mm and the shaft diameter is 2.75 mm. Large elliptical rings for finger and thumb give more handling comfort and friction-free Teflon® bearings deliver a smoother tactile feel.

Teflon is a trademark of The Chemours Company.

TFCC Solutions—Micro SutureLasso™ Repair

These 6-inch long, cannulated, stainless steel shafts facilitate easier repair of soft-tissue tears in the triangular fibrocartilage complex (TFCC). All 3 models are preloaded with a braided nitinol suture shuttle to enable placement of both simple and mattress stitches. The Micro SutureLasso suture passer tapers from 16 ga at the base of the ergonomic handle to 20 ga along the last 20 mm to the tip.

Synergy^{Resection}TM Distal Extremity Shaver Blades and Burrs

Made with the same attention to detail as their larger counterparts, the disposable small joint shaver blades and burrs provide outstanding performance in bone and tissue resection applications. The disposable small joint shaver blades and burrs can be used in all Arthrex shaver handpieces and can be inserted with the cutting window in the up or down orientation.

Synergy^{RF}TM Bipolar Ablation System and Apollo^{RF}[®] SJ50 Probe

This minimally invasive system is used to effectively ablate and coagulate tissue in arthroscopic procedures.

The Apollo^{RF} SJ50 probe is the first RF probe with optimized aspiration for small-joint arthroscopy. It features 360° edge control for precise debridement and an anatomic 50-degree tip configured to reach and ablate tissue precisely. Reduced probe dimensions allow for ease of access in small joints.

The SJ50 also has a low default ablation setting for reduced energy delivery.

CoolCutTM Radiofrequency Ablation

CoolCut radiofrequency devices feature an innovative ergonomic handle with finger-touch controls.

The pioneering design of the CoolCut electrode tips makes it possible to operate the CoolCut series at extremely low power settings, thereby increasing patient safety without sacrificing performance. The reduction of the power requirements also allows for the absence of a ceramic ring surrounding the electrode face, reducing the size of the tip, which aids in reaching target tissue in anatomically tight spaces.

ArthroCell™ Cellular Bone Graft

Viable Allogenic Cellular Bone Matrix

ArthroCell viable cellular bone allograft contains cellular, scaffold, and gel components derived from human bone. The cellular component consists of mesenchymal stem cells, osteoprogenitor cells, and pluripotent cells.

- A nonimmunogenic cellular bone matrix intended for use as a bone void filler for bone defects, fusions, and nonunion orthopedic applications
- Osteogenic, osteoconductive, and osteoinductive potential
- Final product is moldable for ease of use and optimal handling
- Novel cryoprotectant (DMSO-free) and noncytotoxic
- Convenient: stored in a cryogenic freezer (-65° C) for up to 2 years

AlloSync™ Pure Demineralized Bone Matrix

AlloSync Pure demineralized bone matrix can be used in an arthroscopic environment.

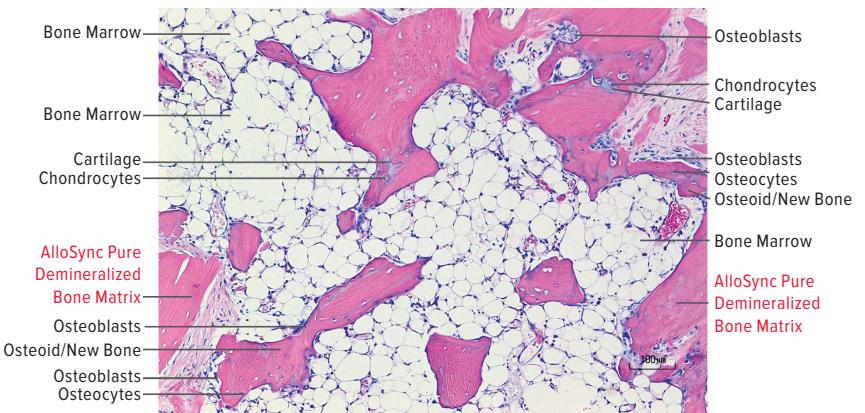

AlloSync Pure osteoinductive demineralized bone matrix (DBM) is derived from 100% human allograft bone with no extrinsic carriers. When prepared, AlloSync Pure DBM resists irrigation and can be used in a fluid environment.¹ The clinician can control the handling properties of AlloSync Pure bone matrix, which includes decreasing the viscosity for injectable applications or increasing the viscosity to add autograft and/or allograft. The proprietary rice-shape fiber technology used to process AlloSync Pure bone matrix increases the osteoinduction and osteoconductive surface area to accelerate cellular ingrowth.²

- Derived from 100% human allograft bone without any extrinsic carriers
- Poststerilization, every lot is tested *in vivo* to ensure osteoinductivity
- Demineralization process preserves native bone morphogenetic proteins (BMPs) and growth factors
- Resists irrigation
- Histologically proven to contain all 5 elements of bone formation, including new bone, bone marrow, osteocytes, chondrocytes, and cartilage postimplantation at 28 days³
- May be hydrated with bone marrow aspirate (BMA), platelet-rich plasma (PRP), blood, saline, or other cellular components
- Sterile to device-grade standards (10^{-6}) and stored at ambient temperature
- Provided in a ready-to-use mixing jar
- 4 sizes available
- 5-year shelf-life

ALLOSYNC PURE

AlloSync™ Demineralized Bone Matrix

AlloSync Bone Products May Provide Osteoinductive and Osteoconductive Properties

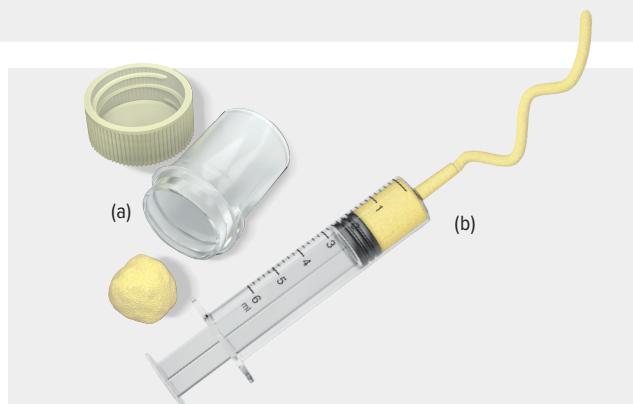

- Osteoinduction—signaling molecules such as bone morphogenetic proteins (BMPs) that aid in cell differentiation down osteoblastic pathways
- Every lot of demineralized bone matrix (DBM) is tested for osteoinductive potential, using either an in vitro assay or in vivo model
- Osteoconduction—scaffolding from DBM particles for osteoblasts to form new bone
- Additional scaffolding properties are provided in AlloSync cancellous bone with the addition of cancellous bone chips

Superior Handling Characteristics via the Reverse-Phase Medium (RPM) Carrier

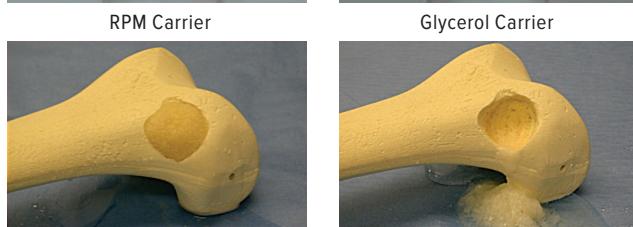

- RPM is an inert, biocompatible copolymer consisting of polypropylene oxide and polyethylene oxide
- Material is flowable at room temperature and thickens to become more viscous at body temperature
- RPM allows the DBM graft to be moldable and packed into any defect size or shape
- AlloSync bone products will resist irrigation and can be used in a fluid environment without the fear of graft migration, unlike some other DBMs

AlloSync Bone Products Offer Ease of Use and Terminal Sterility

- Provided as a ready-to-use, off-the-shelf product that requires no thawing or premixing preparation
- Terminal sterilization using electron beam results in a sterility assurance level (SAL) of 10^{-6}
- Room temperature storage

AlloSync bone products are indicated for orthopedic applications as filler for gaps or voids that are not intrinsic to the stability of the bony structure. AlloSync bone products are indicated to be packed gently into bony gaps in the skeletal system as a bone graft extender (extremities, spine, and pelvis) and as bony void filler of the extremities and pelvis. These defects may be surgically created or result from traumatic injury to the bone.

ALLOSYNC

ArthroFLEX® Dermal Allograft

ArthroFlex dermal allograft is an acellular dermal extracellular matrix intended for supplemental support and covering for soft-tissue repair. Matracell® technology, a patented and validated process by LifeNet Health, renders the ArthroFlex allograft dermis acellular, without compromising biomechanical or biochemical properties. This process allows the matrix to retain its growth factors, native collagen scaffold, and elastin, which are required for healing.

- An intact acellular matrix of collagen, elastin, and growth factors provides a clean scaffold intended for supplemental support and covering for soft-tissue repair
- Elastin and collagen provide unparalleled strength for supplemental support and covering for soft-tissue repair
- Short processing time reduces the opportunity for water-mediated lysis of the natural collagen and elastin scaffold
- Matracell technology removes donor DNA from the dermal matrix, ensuring a biocompatible scaffold to facilitate repair
- Uses a validated DNA assessment method, able to detect as little as 1 ng/mL of nucleic acid to ensure the tissue has been decellularized
- Uses multiple disinfecting agents to provide comprehensive tissue disinfection
- Terminally sterilized with a 3-year shelf life

ElbowLOC® Arm Positioning System

New!

The ElbowLOC arm positioning system is an upper extremity positioning device made specifically for surgery from the humerus to the hand in one self-contained sterile system. It's easy to assemble, intuitive to use, incredibly functional, and durable.

The system allows for supine, lateral, or suspended positioning for arm and elbow surgery and includes a traction tower system for wrist and hand arthroscopy and fracture work.

ElbowLOC Arm Positioning System (AR-1600S)

Small Joint Limb Holder

The small joint limb holder provides a stable platform for arthroscopy or open procedures of the elbow. It mounts conveniently on all surgical tables and adjusts for height, width, and rotation to maximize visualization and limb stability. The internal tourniquet option facilitates controlled visualization when conversion is made to an open procedure.

TRIMANO® Wrist Positioner

The TRIMANO wrist positioner allows the surgeon to position the hand using the TRIMANO support arm and adapter. The wrist positioner connects directly to the adapter and is in the sterile field.

The wrist positioner is a radiolucent Weinberg finger fixation device intended for use during wrist arthroscopy, distal radius fracture surgery, and other open procedures.

This description of technique is provided as an educational tool and clinical aid to assist properly licensed medical professionals in the usage of specific Arthrex products. As part of this professional usage, the medical professional must use their professional judgment in making any final determinations in product usage and technique. In doing so, the medical professional should rely on their own training and experience, and should conduct a thorough review of pertinent medical literature and the product's directions for use. Postoperative management is patient-specific and dependent on the treating professional's assessment. Individual results will vary and not all patients will experience the same postoperative activity level and/or outcomes.
