### Description

Energel wound hydrogel is a sterile, water-soluble gel formulated to maintain a moist wound environment and provide moisture to a dry wound or surgical incision.

### Indications

Energel hydrogel is intended to cover a wound to protect against abrasion, friction, desiccation, and contamination.

### Product Features and Specifications

- Double-packaged sterile for use in the operating room
- Optimally sized for single use (7.5 g / 0.26 oz)
- 10 sachets per box
- Compatible with JumpStart dressings, which are powered by patented V.Dox™ technology
- Use Energel hydrogel to activate JumpStart dressing’s embedded microcell batteries
- Maintains JumpStart dressing’s conductivity for up to 7 days

### Application

- Cleanse wound and surrounding skin prior to application.
- Hydrate dressing with a thin, even layer of Energel hydrogel and place onto wound, or apply enough Energel hydrogel to cover the wound base.
- Apply appropriate cover dressing(s) to help manage wound drainage and maintain a moist wound environment.

### To Use With JumpStart Dressings

- Apply a thin, even layer of Energel hydrogel on the dotted side of the wound dressing.
- Place the dressing, dots down, directly onto the wound.
- Gently press down to ensure direct wound contact.
## Suggested Application Volumes of Energel Hydrogel

### Note:
These are approximate amounts of Energel hydrogel to use when dressing a wound, based on size of the selected dressing. You may choose to add more or remove a small amount, as needed, depending upon the condition of the wound and to ensure a thin, even layer over the dotted surface of the dressing.
